**A traditional bank** is the only source that will verify a transaction. **Blockchain** is comprised of digitally linked data modules that make every transactional move secure and guaranteed once initialized.

Altering this system is an impossible task since it is formed by blocks of encrypted information that cannot be broken.

**The Blockchain** is a revolutionary technology that **the Islamic finance ecosystem** could leverage to exponentially enhance business processes and streamline operations. Blockchain creates the possibility of coordinating institutions' transactional activities within a strong mechanism of trust and transparency. It is apparent that the characteristics and conditions of Blockchain are in alignment with the principles of Islamic Finance. In addition, its usage would open the ecosystem to a raft of interesting opportunities. More importantly, **Blockchain is a perfect medium to incorporate and operationalize Islamic values of justice, equality, trust and fairness into finance which embodies the spirit of the Shariah.**
